

INVISIBLE DRAIN

How much space should I leave between tiles on the shower tray?

The diagram below shows an overhead view of the space needed between tiles on the shower tray.

Perimeter: shower tray must have 4 mm on all 4 sides.
Between tiles: Except in the case where there is a single tile, space should be 2 to 4 mm.

* the tiles at the end of the shower tray might need to be cut lengthwise to make all the spaces equal.
